bioRxiv is receiving many new papers on coronavirus SARS-CoV-2. A reminder: these are preliminary reports that have not been peer-reviewed. They should not be regarded as conclusive, guide clinical practice/health-related behavior, or be reported in news media as established information.

# Pubpeer ou l'après-publication

The paper was submitted on March 16, and accepted on March 17. This creates some new concerns.

- With an ethical approval on March 6, a 14-day patient follow up as stated in the paper, and a submission date of March 16, the timeline becomes seemingly impossible. Could the authors please clarify?
- Was the paper indeed peer reviewed within 24h? That seems incredibly fast.
- One of the authors on this paper is also the Editor in Chief of the journal in which the paper was accepted, i.e. the International Journal of Antimicrobial Agents. This might be perceived as a huge conflict of interest, in particular in combination with the peer review process of less than 24h.

International Journal of Antimicrobial Agents
